8 . Power On Sequence

- 1. The supply voltage for input signals should be same as $V_{\text{DD.}}$
- 2. When the power is off , please keep whole signals (Hsync,Vsync,DENB,CLK, Data) low level or high impedance.

All the optical measurement shall be executed 30 minutes after backlight being turn-on. The optical characteristics shall be measured in dark room (ambient illumination on panel surface less than 1 Lux). The measuring configuration shows as following figure.

Optical characteristics measuring configuration

Note 9-1: The definitions of viewing angles are as follows.

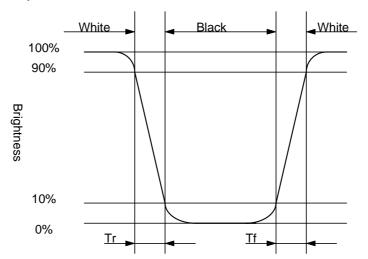

* 12 o'clock Gray scale inversion direction

Note 9-2 : The definition of contrast ratio $CR = \frac{Luminance when Testing point is White}{Luminance when Testing point is Black}$

Note 9-3: Topcon BM-5A or BM-7 fast luminance meter 1° field of view is used in the testing.

Note 9-4: Definition of Response Time Tr and Tr:

Note 9-5: The uniformity of LCD is defined as

 $U = \frac{\text{The Minimum Brightness of the 9 testing Points}}{\text{The Minimum Brightness of the 9 testing Points}}$

The Maximum Brightness of the 9 testing Points

Luminance meter: BM-5A or BM-7 fast(TOPCON)

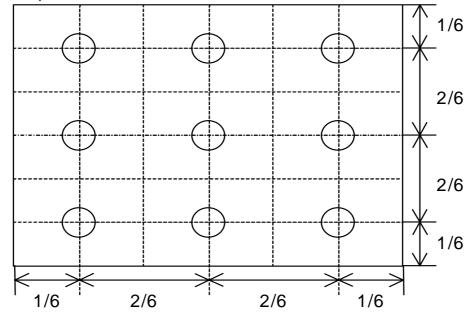

Measurement distance: 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction: Perpendicular to the surface of module

The test pattern is white.

Note 9-6: Cross Talk (CTK) =
$$\frac{|YA-YB|}{YA} \times 100\%$$

YA: Brightness of Pattern A

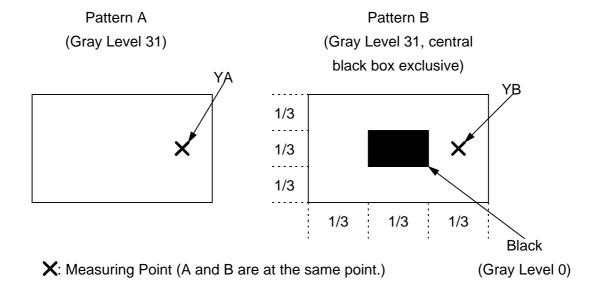

YB: Brightness of Pattern B

Luminance meter: BM 5A or BM-7 fast (TOPCON)

Measurement distance: 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction: Perpendicular to the surface of module

Note 9-7: The "LED Life time " is defined as the module brightness decrease to 50% original Brightness that the ambient temperature is 25° C and $I_{LED} = 400 \text{mA}$.

10. Handling Cautions

10-1) Mounting of module

- a) Please power off the module when you connect the input/output connector.
- b) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- c) Protective film (Laminator) is applied on surface to protect it against scratches and dirt.
- d) Please following the tear off direction as figure 10-1 to remove the protective film as slowly as possible, so that electrostatic charge can be minimized.

10-2) Precautions in mounting

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

10-3) Adjusting module

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

10-4) Polarizer mark

The polarizer mark is to describe the direction of wide view angle film how to mach up with the rubbing direction.

10-5) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.
